

# Chemistry Marking scheme and CRIB

## General Instructions

- Reading time – 5 minutes.
- Working time – 3 hours
- Board-approved calculators may be used
- Write using blue or black pen
- Draw diagrams using pencil
- A Data Sheet and Periodic Table are provided at the back of this paper
- Write your candidate number and class at the top of each page in Part B and on the answer booklet

CHECKLIST	
Each boy should have the following :	
1 Question Paper	
1 Multiple Choice Answer Sheet	
1 8 - Page Booklet	

Chemistry Classes.

1 JAG	2 JME	3 AKBB
4 MMB	5 AKBB	6 JAG

## Section I Pages 2 - 24

### Total marks (100)

This section has two parts, Part A and Part B

### Part A

#### Total marks (15)

- Attempt Questions 1-15
- Allow about 25 minutes for this Section

### Part B

#### Total marks (69)

- Attempt Questions 16-29
- Allow about 2 hours for this Section

## Section II Pages 25-28

### Total marks (16)

- Attempt Question 30 in this section.
- Allow about 35 minutes for this Section

**Part A****Total marks (15)****Attempt Questions 1-15****Allow about 25 minutes for this Part**

Answer the questions in the spaces provided  
Show **all** relevant working in questions involving calculations

**Marks****Question 16** (6 marks)

At the start of the HSC course you performed an experiment that allowed you to distinguish between alkanes and alkenes.

- (a) Identify an alkane and an alkene which you used in this experiment plus any other reagents used. 2

*Name a specific alkane and alkene (1 mark)*

*which could have been used by them and bromine water (1 mark)*

- (b) Identify the hazards involved in this experiment. 2

*Organics – flammable and toxic*

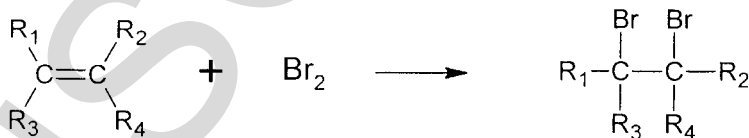

*Br<sub>2</sub> – corrosive and toxic*

- (c) Write an equation for any reaction which occurred. 2

*Any completely correct equation (2 marks)*

*minus 1 mark for every mistake*

*e.g.*

*If alkane substitution reaction is used U.V. must be included in equation*

Class

Candidate Number

**Question 17** (3 marks)

Distinguish between stable and radioactive isotopes and identify the conditions under which a nucleus is unstable.

3

*Definition of radioisotope (not using terms unstable or emit radiation) (1 mark)*

*Must be correct i.e. non-linear progression. Large nuclei (if specific size given, must be correct) (1 mark)*

*e.g. For elements with a small atomic mass there is a stable ratio of protons:neutrons known as the zone of stability. Isotopes whose proton:neutron ratio lies outside this zone are unstable and will decay/disintegrate/break-up. In addition if nuclei are very large (atomic no. >83) they are unstable and will decay.*

**Question 18** (2 marks)

Complete the following table, which refers to a number of titrations carried out in a school laboratory using solutions in the range 0.1-0.5M.

2

<b>Titrant</b>	<b>Other reactant</b>	<b>Appropriate indicator</b>
HCl	NaOH	<i>Bromothymol blue Methyl orange Phenolphthalein</i>
CH <sub>3</sub> COOH	LiOH	<i>Phenolphthalein</i>
NH <sub>3</sub>	HNO <sub>3</sub>	<i>Methyl orange</i>

*all correct (2 marks)  
one mistake (1 mark)*

Class

Candidate Number

**Marks****Question 19** (4 marks)

- (a) Draw a labelled diagram of an operating galvanic cell that is made up of two half cells, each containing a metal in contact with its ions. Label the cathode, the anode, and the salt bridge. **3**

*Diagram (1 mark)**Metal + metal ions, salt bridge (1 mark)**Identified cathode and anode, named electrolyte in salt bridge (1 mark)*

- (b) Calculate the voltage of this cell under standard conditions. **1**

*Values are given to 2 decimal places  $\therefore$  so should answers be. Calculate means show working.*

*etc*

**Marks****Question 20** (3 marks)

Explain why the Haber process is based on a delicate balancing act involving reaction energy, reaction rate and equilibrium.

**3**

*State Haber process exothermic. If  $T \uparrow$  rate  $\uparrow$  but yield  $\downarrow$  (1 mark)*

*Explain rate needs to be reasonably high so process economically viable (1 mark)*

*'Compromise' temperature chosen and explanation (both rate and yield considered) (1 mark)*

**Question 21** (3 marks)

Compare one physical and one chemical property of the oxygen allotropes  $O_2$  and  $O_3$  and account for the differences on the basis of structure and bonding.

**3**

*Describe structure (shape) and bonding (polar) in both  $O_2$  and  $O_3$  (1 mark)*

*Compare 1 physical and 1 chemical property of  $O_2$  and  $O_3$  (2 marks)*

Class

 Candidate Number

Marks

**Question 22** (4 marks)

Consider the data on the greenhouse gases presented in the graph below.

The greenhouse gas and deuterium ( $\delta D$ ) records for the past 650,000 years from ice cores.  $\delta D$ , the deviation of the deuterium/hydrogen ratio from an isotope standard, is a proxy for air temperature; more positive values indicate warmer conditions.

- (a) Which gas was most abundant in the atmosphere 500 000 years ago?

1

 $CO_2$ 

- (b) Write chemical formulas for the three gases.

1

 $N_2O$ ,  $CO_2$ ,  $CH_4$ 

- (c) Assess the validity of the claim that these three gases are greenhouse gases.

2

*Validity – supported by data presented*

*Identify graph feature (1 mark)*

*Identify feature (correlation between peaks) and identify if this feature supports the claim (2 marks)*

Class

Candidate Number

Marks

**Question 23** (4 marks)

Discuss the use of neutralisation in dealing with an acid spill in a laboratory.

**4**

*Identify a problem caused by spilt acid e.g. corrosion.*

*Identify the need for safe clean up*

*Identify the need for safe disposal (environment)*

*Discuss one method that meets these criteria*

*Identify one method and explain why it is chosen*

*And an appropriate neutralising agent*

ClassCandidate Number

Marks

**Question 24** (4 marks)

One acidic oxide found in the atmosphere is  $\text{SO}_{2(g)}$ .

- (a) Name one natural and one industrial source of  $\text{SO}_{2(g)}$ .

1

*Must have both e.g. natural – volcano*

*Industrial – fossil fuel combustion*

- (b) Write an equation to demonstrate the acidic nature of  $\text{SO}_{2(g)}$ .

1

- (c) At  $25^\circ\text{C}$  and  $100\text{kPa}$ , what volume of  $\text{SO}_{2(g)}$  would be needed to produce  $500\text{mL}$  of  $1.05\text{M}$  sulfurous acid?

2

$$n(\text{SO}_2) = n(\text{H}_2\text{SO}_3) = 0.500 \times 1.05 \text{ (1 mark)}$$

$$V(\text{SO}_2) \text{ at } 25^\circ\text{C and } 100\text{kPa}$$

$$= 0.500 \times 1.05 \times 24.19\text{L}$$

$$= 13.0\text{L (1 mark)}$$

**Question 25** (5 marks)

In an experiment to determine the ammonia concentration in a bottle of cloudy ammonia, a student transferred a 25.00mL aliquot of cloudy ammonia to a 250.0mL volumetric flask and made it up to 250.0 mL with deionised water. The contents of this volumetric flask were thoroughly mixed. The student then titrated 25.00mL aliquots of this solution against 0.2530M HCl and obtained an average titre volume of 22.50mL. Assume the density of the ammonia solution is 0.950 g/mL.

Calculate the concentration of  $\text{NH}_3$  in the cloudy ammonia as %w/w (grams per 100g of solution).

**5**

$$n(\text{NH}_3)_{dil} = n(\text{HCl}) = 0.02250 \times 0.2530 \text{ mol (2 marks)}$$

$$[\text{NH}_3]_{undil} = \frac{0.02250 \times 0.2530}{0.02500} \times 10 = 2.277 \text{ M (3 marks)}$$

$$\text{conc}(\text{NH}_3) = 2.277 \times 17.034 = 38.79 \text{ g/L (4 marks)}$$

$$\frac{38.79}{950} \times 100 = 4.08\% \text{ w/w (5 marks)}$$

Chemical monitoring of the concentrations of ions such as  $\text{Mg}^{2+}$ ,  $\text{Ca}^{2+}$ ,  $\text{NO}_3^-$ ,  $\text{PO}_4^{3-}$  is important to manage the quality of water resources.

For one cation and one anion from the list above:

- (a) Identify a possible source and state whether the source is natural or a result of human activity. **2**

*Correctly identifies one cation, source; natural (1 mark)*

*Correctly id one cation and one anion AND specific sources; natural/not (2 marks)*

- (b) Explain why monitoring and management of the concentrations of the two ions you have chosen is important. **2**

*ID 'water hardness' AND 'eutrophication'*

*OR ID one of the above and explain*

} (1 mark)

*ID AND explains problems caused by hardness and eutrophication (2 marks)*

- (c) Discuss the range and chemistry of tests used to monitor one of the ions you have chosen. **3**

*ID one specific test OR explain that different conditions/concs require different tests (1 mark)*

*ID one test AND its range OR chemistry (2 marks)*

*ID two tests (one specific) AND range AND chemistry (3 marks)*

Class

Candidate Number

Marks

**Question 27** (8 marks)

Human activity has caused changes in the composition and structure of the atmosphere.

- (a) Identify the origins of CFCs and halons in the atmosphere. 1

*ID CFCs and halons as anthropogenic (1 mark)*

- (b) Explain the impacts of CFCs and halons on the atmosphere. 4

*ID gases as GHG (greenhouse gas) OR ozone depleting (1 mark)*

*ID gases as GHG AND O<sub>3</sub> depleting*

*OR ID gases such as O<sub>3</sub> depleting AND explains problems caused* } (2 marks)

*AND*

*Relates GHG OR O<sub>3</sub> destruction to properties of CFCs/halons (3-4 marks)*

**Question 27 continued on next page.**

Class

Candidate Number

**Question 27 continued****Marks**

- (c) Assess the measures being taken to alleviate the problems associated with CFCs.

**3**

*ID search for replacements (HCFC or HFC) and international protocols (1 mark)*

*Assesses one measure (1-2 marks)*

*Assesses two measures (2-3 marks)*

*Distinguish clearly between O<sub>3</sub> depletion and Global Warming*

*NB: Kyoto protocol : GHG*

*Montreal (Vienna, Copenhagen) : CFC*

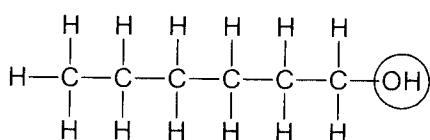

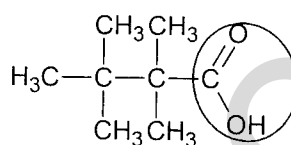

Class

Candidate Number

Marks

**Question 28** (8 marks)

- (a) Draw the structural formulas of 1-hexanol and propanoic acid. Circle and name the functional groups in these molecules. 2

*Hydroxyl (alcohol)**carboxylic acid (-oic acid)**Must show all atoms and all bonds*

- (b) 1-hexanol and 3,3-dimethyl-1-butanol are isomers. Explain why 1-hexanol has a higher boiling point than 3,3-dimethyl-1-butanol. 2

*ID dispersion forces between hexanol molecules stronger than those between butanol (1 mark)*

*EXPLAINS difference in bp (1-2 marks)*

*NB: butanol is more dense than 1-hexanol*

*0.844g/mL vs 0.814g/mL*

- (c) Draw a fully labelled diagram of the apparatus needed to esterify 1-hexanol and propanoic acid in a school laboratory. 2

*Correctly drawn apparatus and safe heating*

*Labels must include "condenser", "H<sub>2</sub>O in", "H<sub>2</sub>O out" and safe heating method*

*NB: water bath boils at 100°C. will not allow heating under reflux for this esterification.*

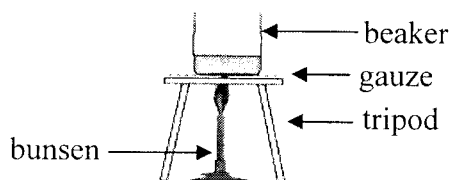

**Question 28 continued on next page.**

Class

Candidate Number

**Question 28 continued****Marks**

- (d) Explain why the apparatus you drew in (c) would be more appropriate than the apparatus below.

**2**

*ID two features or explains one feature (1 mark)*

*ID volatility and flammability AND explains problems (2 marks)*

*NB: "explosion" etc very popular when 'ignite', 'catch fire' etc would be better*

*BP: hexanol 158°C*

*Propanoic acid 140°C*

*Ester 190°C*

*Water 100°C*

*H<sub>2</sub>SO<sub>4</sub> 337°C*

It has been said that in the 21<sup>st</sup> century wars will be fought for access to natural resources such as oil and water, and some people feel that this has already begun.

**8**

Discuss the need for alternative sources of the compounds presently obtained from petrochemicals and evaluate the effect that using these alternative sources will have on environmental concerns such as global warming.

*Problems associated with current use:*

- identifies one problem (1 mark)
  - named derivative and one problem
  - identifies two problems
  - explains one problem
- (2 marks)
- discusses two or more problems (3 marks)

*Alternative Sources:*

- identifies an alternative source (1 mark)
  - identifies two alternative sources
  - gives details about production process (i.e equation/bacteria name of alternative)
- (2 marks)

*Critical evaluation of effects of alternative use:*

- identifies an effect on an environmental concern (1 mark)
- identifies two effects or discusses one (2 marks)
- critically evaluates 2 or more effects of alternative sources use on environmental concerns (3 marks)

## Question 29 (8 marks)

It has been said that in the 21<sup>st</sup> century wars will be fought for access to natural resources such as oil and water, and some people feel that this has already begun.

Discuss the need for alternative sources of the compounds presently obtained from petrochemicals and evaluate the effect that using these alternative sources will have on environmental concerns such as global warming.

8

We have a need for all sorts of petrochemicals as they are important in our lives.

① Various petrochemicals (including ethane) are used in many ways.

② They are so important to us that petrochemicals are needed to produce many of the things we use every day.

ethane → ethene → plastics (e.g. PVC, HDPE, LDPE) and ethanol → solvent and many other products.

③ Even benzene can be used to produce many other products.

④ The main source of petrochemicals is the combustion of fossil fuels (e.g. oil, coal, gas).  

$$\text{C}_x\text{H}_y + \text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O}$$

These pollutants are of great concern as they cause global warming and other environmental problems. (e.g. acid rain, global warming, etc.)

Alternative sources of fuel are being developed. For example, ethanol can be produced from biomass.

⑤ Ethanol can be produced from biomass (e.g. corn, sugarcane) and is a renewable resource.

⑥ Ethanol can be produced from biomass (e.g. corn, sugarcane) and is a renewable resource.

⑦ Ethanol can be produced from biomass (e.g. corn, sugarcane) and is a renewable resource.

⑧ Ethanol can be produced from biomass (e.g. corn, sugarcane) and is a renewable resource.

⑨ Ethanol can be produced from biomass (e.g. corn, sugarcane) and is a renewable resource.

⑩ Ethanol can be produced from biomass (e.g. corn, sugarcane) and is a renewable resource.

⑪ Ethanol can be produced from biomass (e.g. corn, sugarcane) and is a renewable resource.

⑫ Ethanol can be produced from biomass (e.g. corn, sugarcane) and is a renewable resource.

8

Discuss the need for alternative sources of the compounds presently obtained from petrochemicals and evaluate the effect that using these alternative sources will have on environmental concerns such as global warming.

~~that~~ Forest plots are considerable resources & quickly  
depleting, have occurred & put off waste sources that we  
remember. Such sources will allow us to ensure forest plots  
and also prevent further land degradation through drilling etc.

**Question 30** (16 marks)

- (a) Most sulfuric acid is manufactured on the industrial scale using the Contact process which involves the conversion of sulfur dioxide gas into sulfur trioxide gas.

- (i) Write a chemical equation for this reaction and an expression for the equilibrium constant,  $K$ . 1

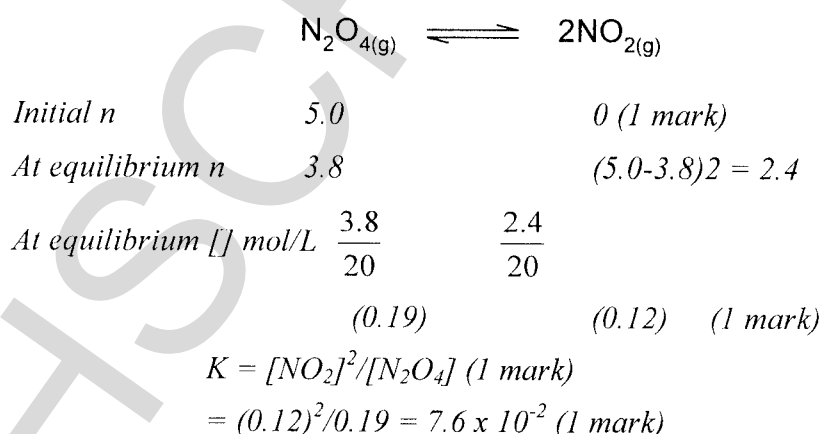

- (ii) How does an increase in pressure affect the value of the equilibrium constant? 1

*Pressure does not affect  $K$*

- (b) Nitrogen dioxide is a poisonous brown gas which may be involved in the production of photochemical smog. 4

In an experiment 5.0 mol of dinitrogen tetroxide were added to a 20L vessel and the system reached equilibrium. At equilibrium 3.8 mol of dinitrogen tetroxide remained. Calculate the equilibrium constant,  $K$ , for this reaction:

Class

Candidate Number

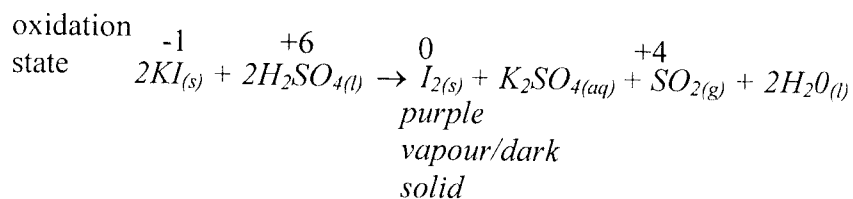

- (c) (i) Describe one reaction in which concentrated sulfuric acid is acting as an oxidant. Include a relevant chemical equation. 2

*A correct equation (1 mark)*

*Description of reaction explaining redox (1 mark)*

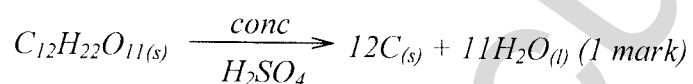

*'Bare' equation and little or no description (1 mark)*

*'Best' examples*

- (ii) Describe one reaction in which concentrated sulfuric acid is acting as a dehydrating agent. Include a relevant chemical equation. 2

*Easiest example dehydration of sucrose or glucose and black cone of carbon, like pumice (1 mark)*

- (d) During your practical work you have performed a first-hand investigation to analyse the effect of disturbing an equilibrium reaction.

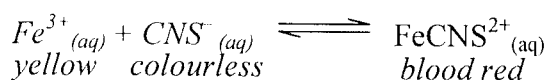

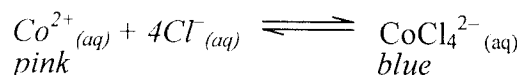

- (i) Outline the procedure you used in this investigation.

3

*Equation for equilibrium system (1 mark)*

*Identify 3 disturbances in system and how these changes were detected (2 marks)*

*Best systems:*

- (ii) Explain how you analysed the equilibrium reaction in a qualitative way.

3

*Control must be mentioned (1 mark)*

*Change in system identified – 3 disturbances (1 mark)*

*Changes explained in terms of Le Chatelier's principle*

## KEY

Atomic Number	79	Symbol of element	Au
Atomic Weight	197.0	Name of element	Gold

## Lanthanides

57 La 138.9 Lanthanum	58 Ce 140.1 Cerium	59 Pr 140.9 Praseodymium	60 Nd 144.2 Neodymium	61 Pm [144.9] Promethium	62 Sm 150.4 Samarium	63 Eu 152.0 Europium	64 Gd 157.3 Gadolinium	65 Tb 158.9 Terbium	66 Dy 162.5 Dysprosium	67 Ho 164.9 Holmium	68 Er 167.3 Erbium	69 Tm 168.9 Thulium	70 Yb 173.0 Ytterbium	71 Lu 175.0 Lutetium
--------------------------------	-----------------------------	-----------------------------------	--------------------------------	-----------------------------------	-------------------------------	-------------------------------	---------------------------------	------------------------------	---------------------------------	------------------------------	-----------------------------	------------------------------	--------------------------------	-------------------------------

## Actinides

89 Ac [227.0] Actinium	90 Th 232.0 Thorium	91 Pa 231.0 Protactinium	92 U 238.0 Uranium	93 Np [237.0] Neptunium	94 Pu [244.1] Plutonium	95 Am [243.1] Americium	96 Cm [247.1] Curium	97 Bk [247.1] Berkelium	98 Cf [251.1] Californium	99 Es [252.1] Einsteinium	100 Fm [257.1] Fermium	101 Md [258.1] Mendelevium	102 No [259.1] Nobelium	103 Lr [262.1] Lawrencium
---------------------------------	------------------------------	-----------------------------------	-----------------------------	----------------------------------	----------------------------------	----------------------------------	-------------------------------	----------------------------------	------------------------------------	------------------------------------	---------------------------------	-------------------------------------	----------------------------------	------------------------------------

Where the atomic weight is not known, the relative atomic mass of the most common radioactive isotope is shown in brackets.  
The atomic weights of Np and Tc are given for the isotopes <sup>237</sup>Np and <sup>99</sup>Tc.
